AltCasts - Language Name Implementation

Callout request

| Project Summary:

|Nomenclature and positioning:

For MVP, there are two primary terminology considerations: the first is how we refer to an alt-cast across the discovery experience, and the second is how we position entry points into an alt-cast and multiview browse page.

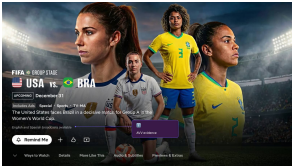

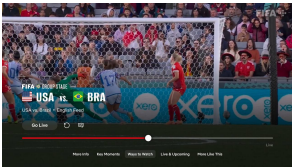

Altcast > Feeds

The term “alt-casts” is jargony, technical, confusing and difficult to localize. A common replacement for Alt-casts across the industry is Broadcasts, but this feels antiquated and strongly associated with radio, the news and outdated media. We feel **Feeds** best describes our MVP experience, is extensible to other content-types, and aligns with member expectations better than Altcast or Broadcast.

Ways to Watch > Choose Feed

Our leading candidate for entry points into alt-cast browsing was previously “Ways to Watch,” however this didn’t receive strong signal in CI for validation, and doesn’t feel action-oriented or directly attached to the concept of alt-casts. Instead, to help emphasize choice and keep alignment across the experience, we’ll use **Choose Feed** as our primary entry point into browsing.

Note: We expect terms across evidence, merch, and off-service content to match.

Design	Chosen Term	Considered Terms	Example
	TBD	Broadcast, Feed, Stream, Cast, Version	English and Spanish broadcasts available.
	TBD	Ways to Watch, Choose Feed, Choose Stream Note: The alts here are dependent on the above term for Broadcast	This phrase would be used as a standalone phrase or a phrase within a sentence. - Select Ways to Watch to choose a broadcast. - The name of a tab: “Ways to Watch”, which allows a member to choose how they want to watch (which broadcast and/or in multiview).

(LOC Survey Considerations)

Styling

Capitalization

Feed Title: Title Case

Feed Description: Sentence case

Evidence strings: Sentence case

Character Limits

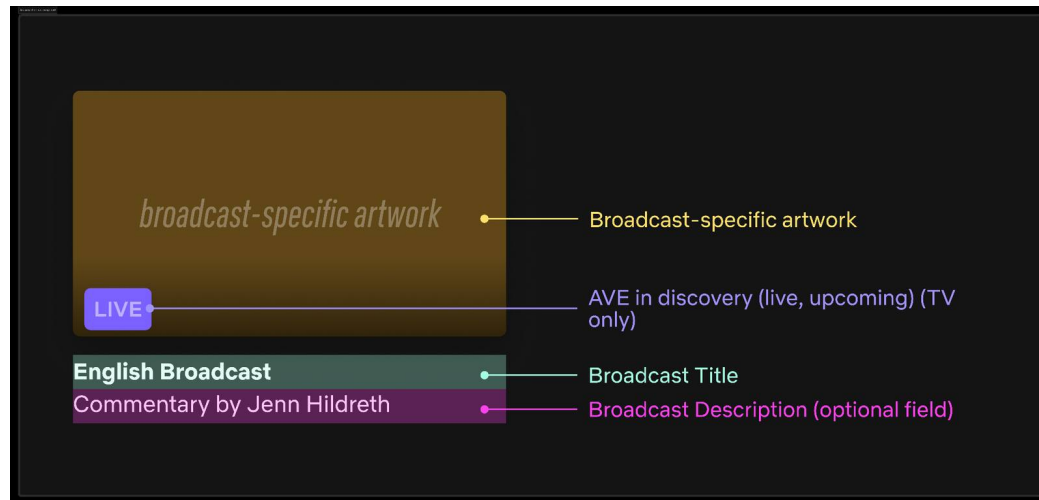

Feed Title: 30-40

Feed Description: 40-50

Note: Character limitations are estimated against normal and worst-case scenarios, but do not guarantee exact max limits due to variable character width in Netflix fonts.

Evidence:

Titles and Description Fields

We've designed flexible Title and Description fields for alt-casts as open-text fields. Our current assumption is that because our MVP examples of alt-casts are language-specific, we'll utilize the title field for highlighting **Language** and the description field to showcase secondary differentiating information, like **Commentators**. That said, as we get closer to launch, should we pivot direction or receive pertinent feedback regarding the discovery experience, we could easily update these fields to shift focus.

Title/Description Truncation logic: If title localizes or extends beyond one line due to accessibility settings, remove description field.

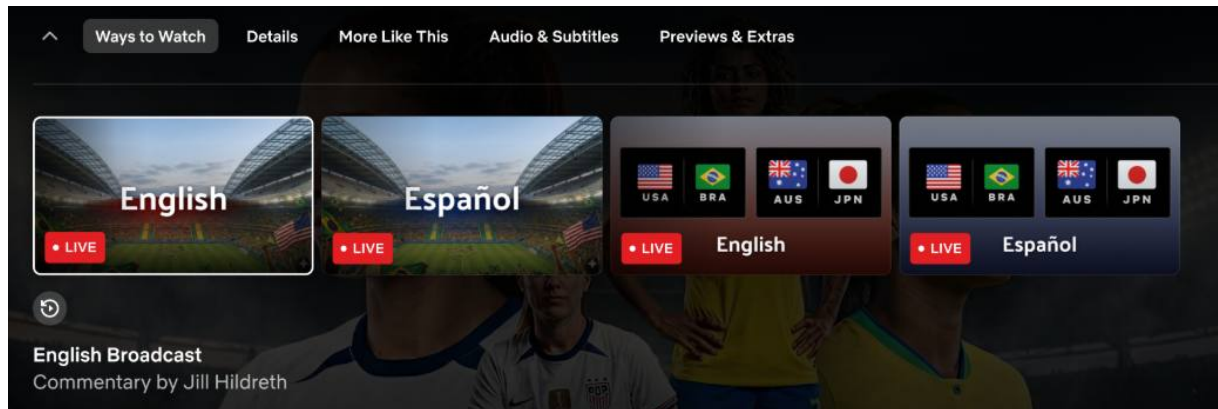

Discovery Evidence

The primary string we'll use across discovery surfaces to indicate language altcasts are available is:

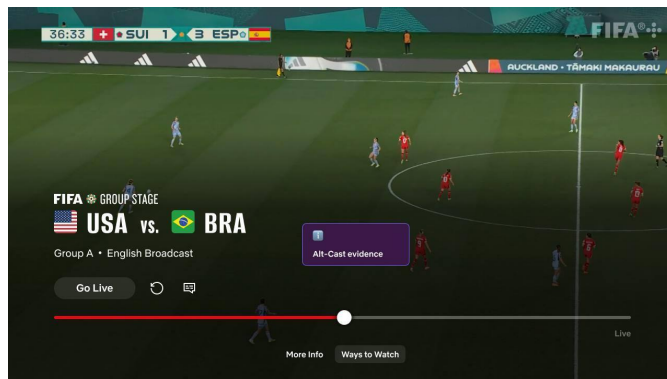

- <language> and <language> feeds available

In addition, we're proposing an overlaid string on top of the broadcast assets to clarify broadcast language. This string would be localized to the member's UI language instead of being baked into the asset.

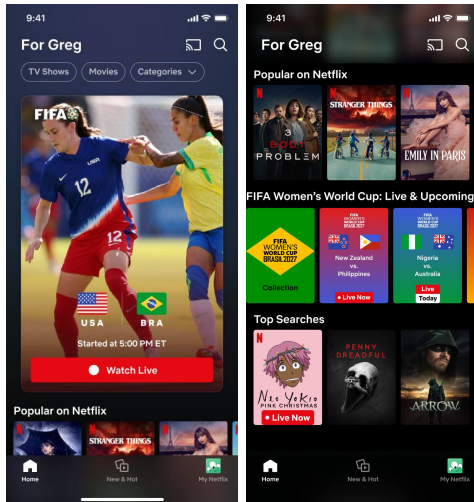

Player Evidence

Within the playback experience, we are including an altcast evidence string alongside existing title evidence. While language context may seem obvious when a member enters a stream and hears the commentator audio, we think this will serve as a reminder that there are multiple feeds available for each game and a contextual marker for members landing in playback directly from Live Billboard.

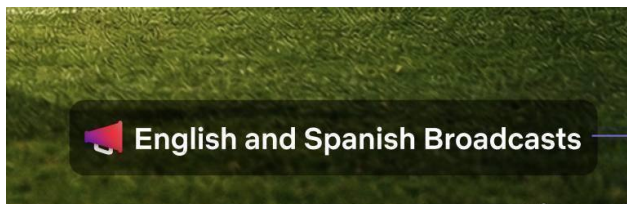

Mobile Evidence

On mobile, with more limited real estate, we'll prioritize timely evidence throughout discovery, but will maintain broadcast evidence on the Mobile DP and in the Player

Callouts

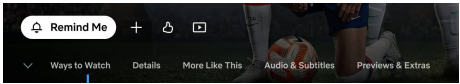

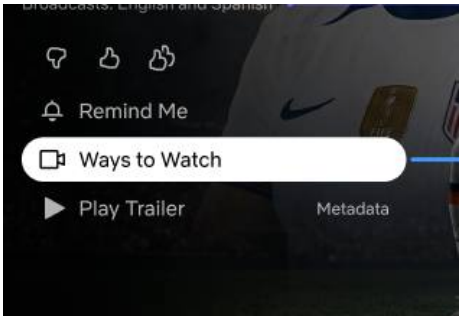

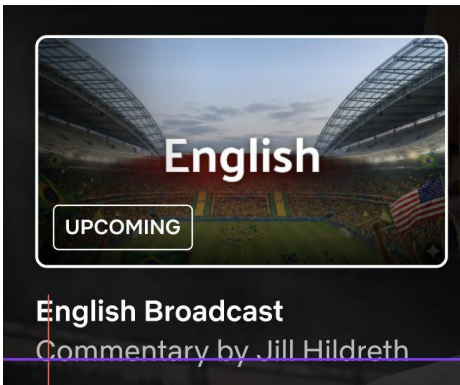

We'll utilize callouts throughout FIFA content to highlight alt-cast availability across the tournament. While there are no current plans to add new FIFA-specific callouts, and the majority of existing live-event callouts have been moved to Availability Evidence, the following logic can be utilized for prioritizing conflicting callouts for this and other events in the future, should they arise:

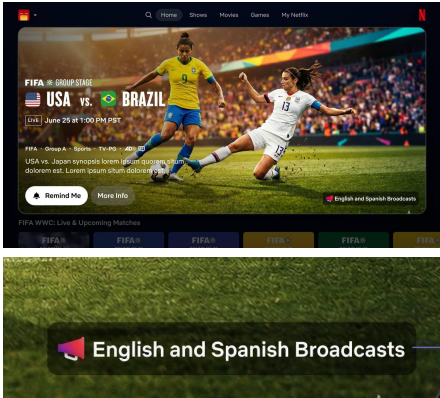

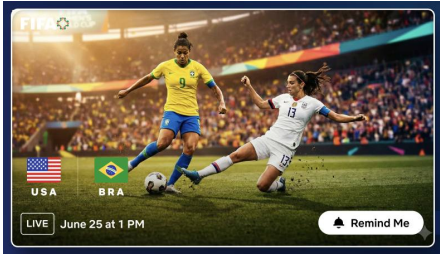

- Any timely information should be prioritized over alt-cast callouts
 - Ex:
 -
- Remove callout when it extends beyond maximum width when localized
 - Ex:
- If existing availability evidence and callouts collide, prioritize availability evidence and hide the callout
 - Ex:

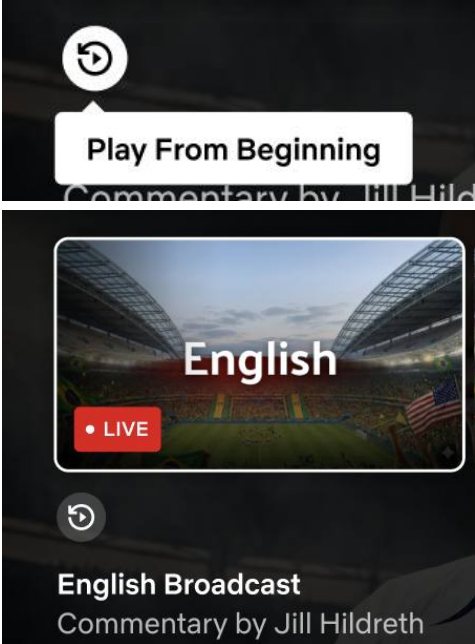

- Note: Availability windows and how this is communicated in evidence are TBD, so this guidance is subject to change.
- In the future, when we have more than 2 language altcasts supported, default to generic string: **Multiple Feeds Available**
 - Note: Elevated feeds, like a branded, talent-based feed, will likely be merchandised as a separate title.

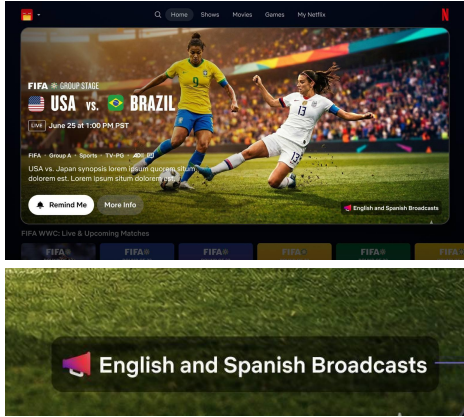

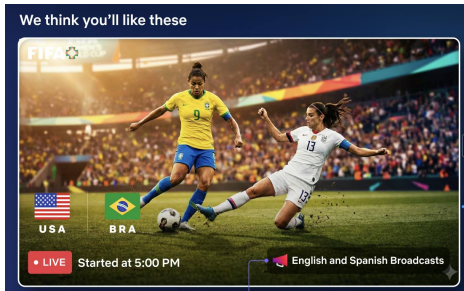

Specs

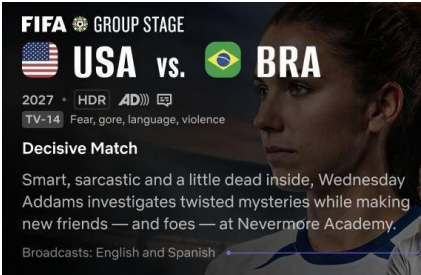

TV UI - Discovery Pre-Live		
Context	Design	Content
Updated DP Evidence - Standard		English and Spanish feeds available.
Updated DP into Menu		Choose Your Feed Choose Feed
Current DP into Menu		Choose Feed
Menu Title Evidence		[asset evidence] UPCOMING [title] <language> Feed [discription] Commentary: <name>

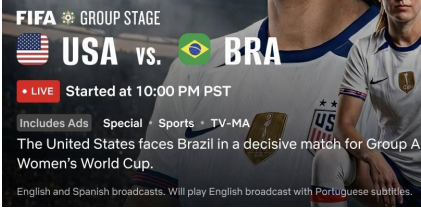

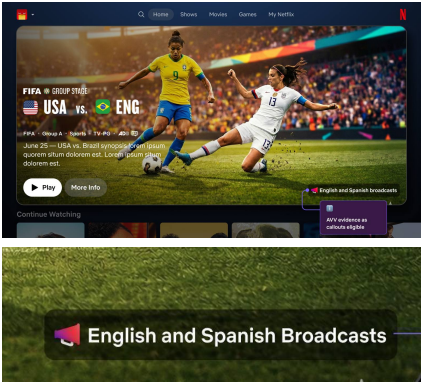

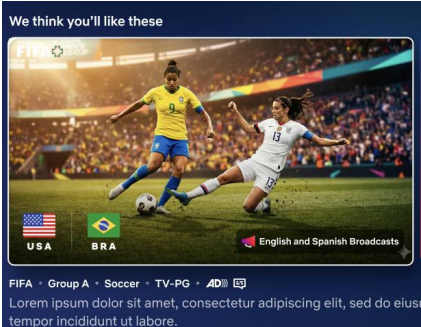

Selecting non-live title		[toast] This event isn't live yet.
Billboard Callout		<English> and <Spanish> Feeds <English> and <Spanish> Feeds Available Watch English or Spanish Feed Choose English or Spanish Feed [if more than 2 casts] Multiple Feeds Available
Row		[cta] <Remind Me>/<Reminder Set>

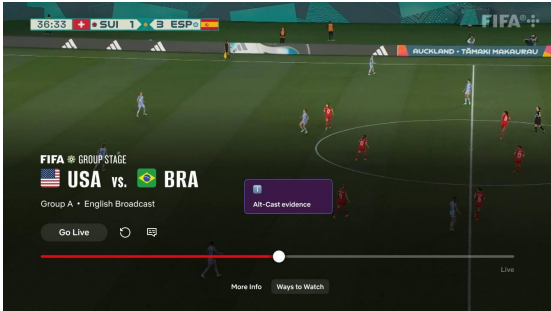

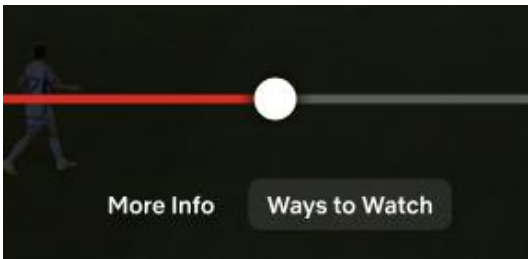

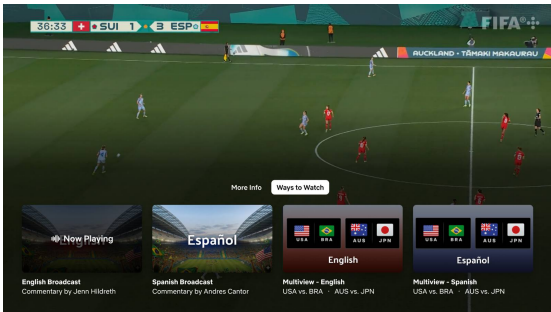

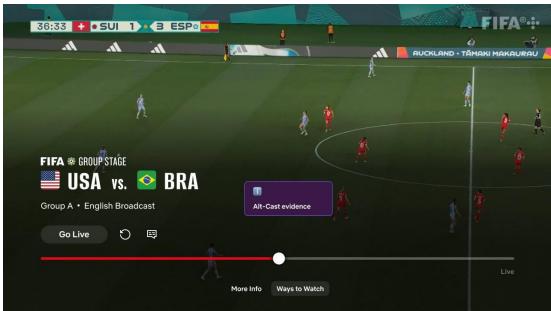

TV UI - Discovery During Live			
Context	Design	Content	CD Notes

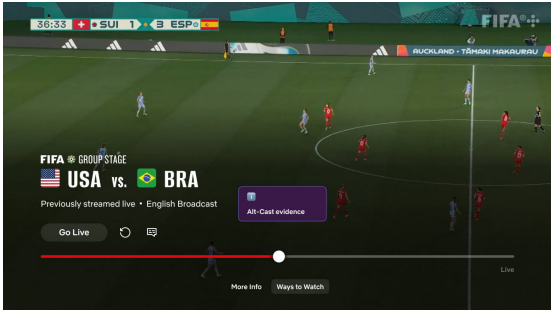

Updated DP - Standard Evidence		English and Spanish feeds available.	
Updated DP - Mismatched Language		Will play English feed with <language> subtitles.	If member's locale or language are set without a supported language feed available, we'll utilize Playback Language Evidence logic to inform members how they're defaulted.
Menu Title		[focused cta] Play From Beginning [title] <language> Feed [discription] Commentary: <name>, <name>	

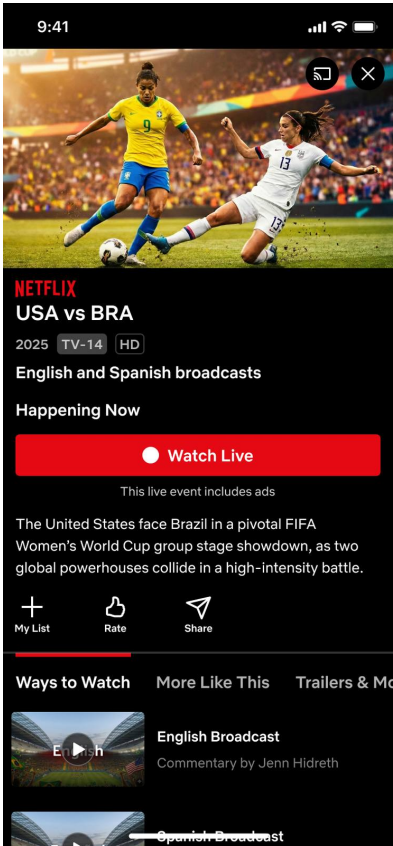

Billboard Callout		<English> and <Spanish> Feeds Available <English> and <Spanish> Feeds Watch English or Spanish Feed Choose English or Spanish Feed	
Row		<English> and <Spanish> Feeds Available <English> and <Spanish> Feeds Watch English or Spanish Feed Choose English or Spanish Feed	Row utilizes callout after event goes live.

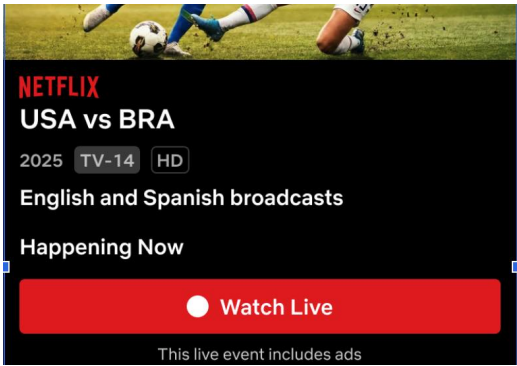

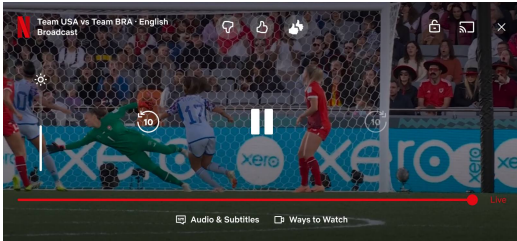

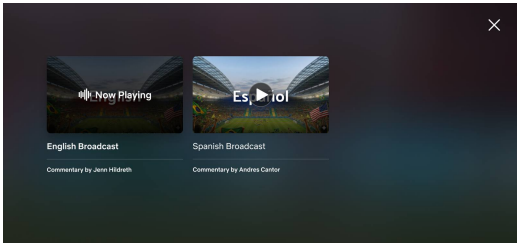

TV UI - Discovery Post-Live			
Context	Design	Content	CD Notes
Updated DP - Standard Evidence		English and Spanish feeds available.	

Updated DP - Mismatched Language		Will play English feed with <language> subtitles.	If member's locale or language are set without a supported language feed available, we'll utilize Playback Language Evidence logic to inform members how they're defaulted.
Menu Title		[title] <language> Feed [discription] Commentary: <name>	
Billboard Callout		<English> and <Spanish> Feeds Available <English> and <Spanish> Feeds Watch English or Spanish Feed Choose English or Spanish Feed	
Row		<English> and <Spanish> Feeds Available <English> and <Spanish> Feeds Watch English or Spanish Feed Choose English or Spanish Feed	Row utilizes callout after event goes live.

TV UI - Player Experience			
Context	Design	Content	CD Notes
Innovation Playback Evidence		<Title evidence> - <Language feed evidence> EX: Team Usa vs. Team Brazil - English Feed	Do we need this or is this evident enough by just entering the feed and having audio turned on?
Magic Drawer Entry		Choose Feed Choose Your Feed	
Magic Drawer Expanded		[overlay] Now Playing Matching discovery title/description	
Follower Tier - Playback		<Title evidence> - <Language feed evidence> EX: Team Usa vs. Team Brazil - English Feed	

Post Live		<Title evidence> - <Timely Evidence> EX: Team Usa vs. Team Brazil - Previously streamed live	
-----------	---	---	--

Mobile UI			
Context	Design	Content	CD Notes
DP		<Language> and <Language> feeds available	This string is the same across pre-playback, during playback, and post-playback.

	 NETFLIX USA vs BRA 2025 TV-14 HD English and Spanish broadcasts Happening Now Watch Live This live event includes ads		
	 Team USA vs Team BRA - English Broadcast Audio & Subtitles Ways to Watch	<Title evidence> - <Language feed evidence> EX: Team Usa vs. Team Brazil - English Feed	
	 Now Playing English Broadcast Commentary by Jenni Hildreth Es, lol Spanish Broadcast Commentary by Andrea Carlor	[title] <language> Feed [discription] Commentary: <name>, <name>	

Deprecated

Language Evidence

The Discovery team is exploring utilizing language-specific evidence (AKA [Playback Notes](#)) to help clarify what experience a member will enter into, specifically targeting members who may be surprised or confused by the experience.

Preferred language available	Original language: [X language]. Will play with [Y language] dubbing and subtitles. Tells members this is a originally in another language. Sets expectations about what members will hear/see when they press play.
Preferred language unavailable If we have subs available in their preferred language	Original language: [X language]. Will play with [Y language] subtitles. Tells members this is a originally in another language. Sets expectations that members will still be able to understand the title in their preferred subs.
Preferred language unavailable If subs aren't available in their preferred language	Will play in [X language]. Tells members this is a originally in another language.

We will utilize similar logic based on a member's current locale, language settings and available language options for a match to showcase an alt-cast specific evidence string. This allows for the majority of members to see standard alt-cast evidence showcasing alt-cast availability, while members without direct language settings will be informed of which experience they'll receive.

Alt-Cast Language Evidence Logic			
Locale	Language Settings	Feed	Evidence
USA	English Audio	English	English and Spanish feeds available.
USA	Spanish Audio	Spanish	English and Spanish feeds available.
USA	Japanese Audio	English	Will play English feed.
Canada	English Audio	English	English and French feeds available
Canada	French Audio	French	English and French Feeds available.
Canada	Japanese Audio	English	Will play English feed.
Canada	Japanese Audio + Japanese Subs on	English	Will play English feed with Japanese subtitles.

Note: if this logic isn't feasible to implement, or Discovery team determines this evidence isn't we should default to the standard evidence type to inform members of both alt-cast availability, and feed language options.
