Project Summary:

We are launching support of Multiview, allowing for watching multiple streams simultaneously, for FIFA WWC in 2027. This spec outlines content design work, including terminology, UI content, and in-product positioning for Multiview.

Nomenclature and positioning:

Multiview

Multiview is considered an industry-standard term for this experience. We validated this against a LOC survey, where many languages localized from this term directly and recognized the term across competitive analysis. We do not currently expect to utilize Multiview as a branded term.

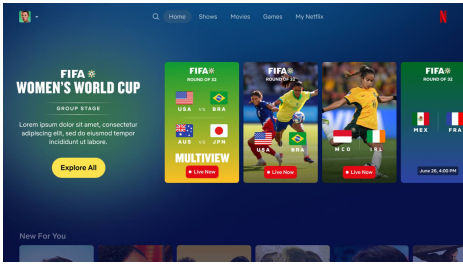

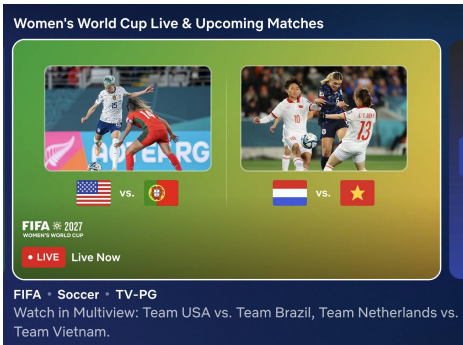

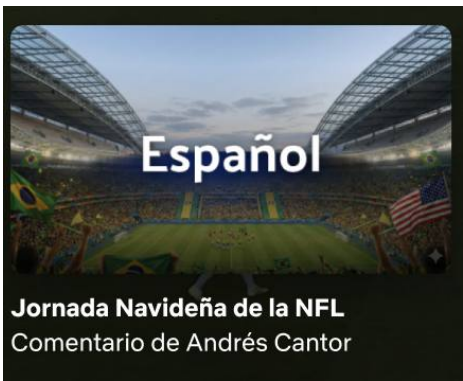

Choose Feed (Entry Point) - **WIP**

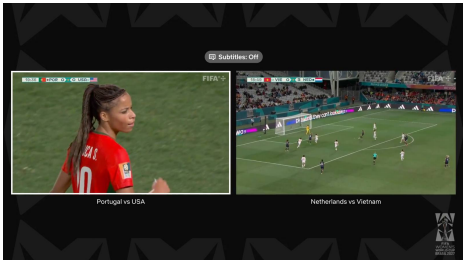

Within discovery, Multiview titles can be found within Lolomo, the FIFA MLP, as well as within the “Choose Feed” page/tab. This is an entry point into a dedicated space that houses both Alt-casts and Multiview broadcast options. See Alt-cast content spec for more details on naming decisions for Choose Feed.

Merch and Evidence

We don't yet know how Multiview titles will be merched, but they'll be accessible within discovery, the MLP, and the “Choose Feed” tab in both the DP and Player UI. That said, we suggest that our multiview titles have an overlay that includes “Multiview” in it so the concept can be localized.

Content Specs

Multiview Discovery			
Context	Design	Content	CD Notes
Tile overlay text		Multiview	Need to define how these tiles are merched and how to best localize “Multiview” in discovery
Title Evidence		[description] Multiview: <team name> vs. <team name> and <title name> vs. <team name> Watch <team name> vs. <team name> and <title name> vs. <team name> at the same time.	Depending on if “Multiview” is in the title asset, we may want to make the description more actionable.
Compact Title Evidence (Choose Feed/Magic Drawer)		[title] Multiview [description] <title>/<title> - <title>/<title> Ex: Multiview: USA vs. Brazil - Australia vs Japan Team USA vs. Team Brazil Team Australia vs. Team Japan Mutiview USA vs. BRA - AUS	This is dependent on how the multiview asset is merched, and whether we are utilizing language overlay that we’re using for Altcasts

	 Mutiview - English USA vs. Brazil - Australia vs. Japan	vs JPN	
Player		[button] Subtitles: <On/Off> [left video] <title name> [right video] <title name>	• We are not providing subtitle settings within Multiview, just the ability to turn them on or off. • We do not have hint text for expanding into full-screen, assuming focus state and industry norms provides enough context.
